

Comments made in an email after the SEC meeting 2-13-2014 and requested to "Please pass on" by Mr. Mike Laughlin, Elko/Fallon, Nevada

After watching some, not all, of this meeting I have come to this conclusion: Biology 101 = taught at Arizona State University where I graduated – this could be called "best science" as my friend Ken Mayer used to say- Quote "When the prey species fall below the predator species the prey species cannot recover without reducing predators" This pertains to Ravens- While we wait 10 to 100 years for habitat re-construction the prey species (ravens) are expanding and the prey species (sage grouse) are declining"++++++ Even a 3rd level Wildlife Biologist with NDOW might be able to grasp this concept—This meeting was smoke and mirrors folks – Ira Hansen and Fred Fulstone were too real for these folks wanting to be politically correct/// Guess what the Ravens will win and the Sage Grouse will be gone while we wait for the habitat to grow in the driest state in the union!!

God save the State of Nevada from these fools!!

Mike Laughlin
